TruSens Z3000 Large Room Air Purifier with Remote SensorPod

DuPont HEPA Filtration and UV-C Light

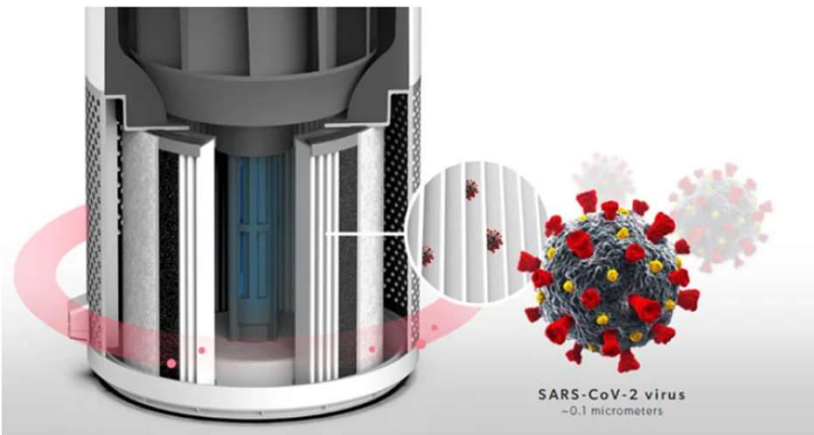

Improve air quality in your personal space with 360 degree DuPont True HEPA filtration combined with the power of ultraviolet (UV-C) light. The filter helps capture airborne viruses, allergens and certain VOC gases whilst the UV-C light kills germs and bacteria trapped in the filter.

SensorPod Air Quality Monitor

An air purifier with a separate sensor detects pollutants throughout the room, not just by the purifier. Place the remote SensorPod away from the air purifier to optimize clean air delivery throughout your space. The purifier automatically adjusts fan speed in response to the SensorPod air quality readings.

Auto Mode with Air Quality Indicator

SensorPod air quality readings are displayed and TruSens adapts accordingly. A colour-coded illuminated ring provides additional information by visually communicating good, moderate, or poor air quality.

TruSens eliminates 99.99% of airborne coronavirus in your indoor space.*

*Results from independent third party testing using aerosolized airborne concentration of human coronavirus 229E over a two-hour period in a sealed chamber. HCoV-229e is a well-established surrogate for SARS-Cov-2.
